Three numbers. Sixty *seconds.*

All we need is the width, height and depth of the space, in millimetres. Grab a tape measure and a pencil.

Don't worry about being exact. A rough measurement is all we need to get started. We'll send you scaled plans to check every size before anything is made.

Front view

Side view

W

Width: wall to wall

Measure at the top, middle and bottom. Walls are rarely straight, so send us the smallest number.

H

Height: floor to ceiling

Measure on the left, in the middle and on the right. Again, send the smallest.

D

Depth: how far out it can come

From the back wall to where you want the front to sit. Check doors, windows and radiators nearby.

Skirting, sockets or a sloping ceiling?

Don't worry about them now. Once you've ordered, we'll ask for two photos of the space and design around them before anything is made.
